

This guide is for potential applicants to the U.S. Department of Defense (DoD) Small Business Innovation Research (SBIR) program. The document identifies unique aspects of the DoD SBIR program, describes the nature of its topics, and links readers to additional agency resources. When used in conjunction with MTIP's [Profile of a Good Candidate](#), this guide will help prospective applicants determine quickly whether to pursue funding under the DoD SBIR program and how best to approach a proposal.

THE DOD SBIR PROGRAM

The DoD SBIR program funds over one billion dollars each year in early-stage R&D projects at small technology companies. DoD SBIR topics focus on dual use technology that can serve both Defense needs and commercial applications. There are three DoD SBIR Phase I solicitations per year. The solicitations will announce: when it will issue (Pre-Release), when the DoD component (a component is a division of the military such as, Army, Navy, etc.) will begin accepting proposals (Open), and the deadline for proposal submissions (Closed). Phase I Pre-Release occurs on or around November 15, April 15 and July 15. Open dates are one month later, and Closing dates follow Pre-Release by two months.

Phase I projects to demonstrate feasibility are presently funded from \$70,000 to \$150,000 for a work plan that can range from 6 to 12 months. The SBIR applicant company must perform a minimum of two-thirds of the research effort, measured by both direct and indirect costs. An average of 25% of the Phase I awardees are first-time DoD winners, and one-third of the DoD awards are to firms with fewer than 10 employees. Awards for Phase II projects are based on successful Phase I completion. The Phase II projects to develop and test a prototype are funded for up to \$1M over a two year work plan. A Phase II contractor may receive up to one additional, sequential Phase II award for continued work on the project.

Historically, about 15% of SBIR proposals are awarded a Phase I contract, and approximately 50% of Phase I projects subsequently advance to Phase II contracts. Montana applicants to any R&D funding resource can substantially improve their odds of being selected for funding by working closely with the no-cost services offered by the Montana Technology Innovation Partnership (MTIP). To engage with this program, see the information box at the end of this Guide.

DoD SBIR is a contract program requiring completion of the proposed work plan under a contract with the Defense component. The funding does not have to be paid back and the applicant company will own the resulting technology. However, in return, commitments are made under the program, including a federal right to use the SBIR-funded technology.

The DoD SBIR general information website can be viewed at: www.dodsbir.net. Under the section titled "Continuous Learning," there are a variety of DoD SBIR resources. These include a Submission Tutorial that offers excellent introduction to the Defense SBIR program and how to prepare and submit a proposal. A text version of the tutorial can be found at a link in the bottom right corner of the tutorial screen. While oriented to introductory guidance, the tutorial is also useful as a quick reference for more experienced program participants.

IDENTIFYING AN APPROPRIATE TOPIC

DoD topics are very specifically oriented to technology for which the Defense component has identified a need. Thirteen DoD components participate in the program but not all of them will publish topics in every solicitation. Because of the specific nature of DOD's topics, the majority are not repeated from one solicitation to the next. Each published topic includes a topic number indicating the component sponsoring the topic, a specific description of the technology requested, and general directions for Phase I and Phase II. Relevant citations will be displayed and there will be a Technical Point of Contact (TPOC) listed with contact information.

There are two ways to perform a topic search:

- 1) Go to www.dodsbir.net and select the Current Solicitations page. Access the current solicitation and on that page, topics can be viewed in documents under each component participating in the current solicitation.
- 2) If preferred, a keyword search can be performed across all DoD service components for the current solicitation. On the Current Solicitations page, below the table of topics organized by component, there is a [Topic Search Engine](#). Start a search with a general keyword, and slowly add more defining keywords to narrow the search field. All of the search results can be listed in a single report file to facilitate viewing.

CONTACTING THE AGENCY

Applicants are strongly advised to make contact with the TPOC listed under a selected topic. Not all of these people will interact meaningfully. However, as is the case in any proposal, it is imperative to collect as much information as possible in order to identify the best connection between the company technology and the sponsor's needs. This is not the right time to provide a long-winded explanation of the company's technology. Applicants need to ask questions and hone in on the sponsor's reason for posting the topic, and any specifications and applications anticipated for the requested technology.

Contact with a TPOC is permitted from the Pre-Release date until the Open period when proposals may be submitted. After the solicitation becomes Open, written questions can be submitted at any time through the DoD SBIR Interactive Topic Information System (SITIS). The questioner and respondent remain anonymous and all questions and answers are posted electronically for general viewing until the solicitation closes. Throughout the proposal process, it is advisable to keep an eye on SITIS for useful information being posted.

PREPARING THE PROPOSAL

The purpose of the proposal is to provide sufficient information to persuade reviewers that the proposed research offers a unique and sound approach to addressing the need expressed in the DoD component topic. The proposal should be written at a level of quality suitable for publication. Following are general recommendations for ways in which applicants can enhance their chances for success:

- **Search topics immediately following Pre-Release.** Every bit of the time allowed will be necessary for assembling a suitable project team and constructing an award-winning technical approach. Even before release, registration can be completed at the [DoD SBIR Submission website](#) and team members can study the proposal expectations by the different military components. During this period until the solicitation opens, topics may be added, modified or withdrawn. Changes are often made to topics, especially during the first week of a pre-release, so make sure to monitor the DoD for updates/changes!
- **Read the detailed instructions throughout the entire solicitation.** One person on the proposal team must be responsible for reading the instructions thoroughly, highlighting all the major and minor requirements, and initiating a proposal template. Some of the components have special instructions that take precedence over the DoD general solicitation. Be sure to check for these instructions at the DoD Submission site.
- **Develop a project plan that envisions both the Phase I and the Phase II R&D activities.** Engage a dialog with the TPOC and use that interaction to sharpen the proposed objectives and technical work plan. Give careful consideration to selection of the project investigators, including consultants and/or subcontractors. There needs to be well-credentialed expertise on the project team for every aspect of the work being proposed. Conduct a team meeting to get full buy-in on the work plan AND on the proposal-writing plan. Develop a schedule and assign responsibilities for completion of the proposal. Immediately start the process of collecting team Curriculum Vitae and any required letters of support.

- **Obtain an outside, third-party review.** Regardless of the proposal author's experience, this step helps ensure that the proposal is fully responsive to the instructions. Even the most experienced authors have a tendency to get "off point" as they work through the details and editing process. An outside eye can catch the drift and proposal non-compliance to solicitation requirements. A reviewer knowledgeable about the DoD SBIR program will invariably identify meaningful ways in which to enhance both the presentation and the content of the proposal.

Sample proposals can be found at two sites:

http://www.sbir.dsu.edu/SBHTI/home/proposal_preparation/sample_proposals/samples.htm

<http://www.acq.osd.mil/osbp/sbir/sb/resources/sample-proposals.shtml>.

Applicants are cautioned not to rely on the format or responses in these proposals. They are only made available to offer perspective on what can be required to achieve an award. Most sample proposals are quite dated, and were awarded under solicitations that have since changed.

SUBMITTING THE PROPOSAL

Once a topic has been selected, a proposal can be set up for submission through the DoD SBIR Submission website. Those applicant firms not already listed at the Submission site will be required to register. If an applicant does not have a business Taxpayer Identification Number (TIN), a personal social security number can be used instead. However, before an award can be made, it will be necessary to update the site with a TIN. The applicant also will need a DUNS number, a contractor CAGE code, and both SIC and NAICS codes. Links are provided in the site registration form to explain how these reference numbers can be obtained.

After registration, the applicant company will have password-protected access to the site to prepare and submit a proposal. In order to get started, a component name must be selected and the topic number inserted. Proposal instructions and reminders are provided throughout the site.

When all required sections for a proposal are completed, applicants can use the proposal checklist to perform a last review. Though there is space for it, no signature is required until the time of award. There is no "submit" button; all completed proposal packages not marked for deletion will automatically be submitted at the solicitation closing date. When the solicitation closes, no further changes can be made, though the proposal can still be viewed and printed.

READY FOR THE NEXT STEP?

This agency-specific SBIR guide has been prepared by the Montana Technology Innovation Partnership (MTIP) and does not imply endorsement from the U.S. Department of Agriculture. A program of the Montana Department of Commerce, MTIP provides free coaching to Montana technology-based companies seeking help in applying to federal and state R&D and commercialization funding programs. For more information, contact the MTIP Program Manager at (406) 841-2749 or visit MTIP's website at www.mtip.mt.gov.
